## **DETAILED ACTION**

### ***Notice to Applicant***

1. This communication is in response to the amendment filed 9 December 2004. Claims 1-7, 8-9, 17-19, and 29 are pending. Claim 8 has been cancelled by an Examiner's Amendment. Claim 1 has been amended. Claims 1-7, 9, 17-19, and 29 (now renumbered 1-12) are allowed.

### ***Double Patenting***

2. The previously pending double patenting rejections are obviated by Applicant's submission of a terminal disclaimer.

### ***Terminal Disclaimer***

3. The terminal disclaimer filed on 9 December 2004 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of U.S. Patent No. 6,714,914 has been reviewed and is accepted. The terminal disclaimer has been recorded.

## **EXAMINER'S AMENDMENT**

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided

Art Unit: 3626

by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Stephen Colby on 9 December 2004.

5. The application has been amended as follows:

Please replace the title with the following:

A system for predefining via an activity scheduler first types of entered data that are processed by an activity processor in real time and second types of entered data that are queued for processing at another time.

Please replace the abstract with the following:

An integrated system for the administration of insurance companies is disclosed which includes a personal computer, a network and one or more file servers.

The system further includes software for performing a plurality of functions which are interconnected and automatic. Manually entered data is verified, integrated into the database and the appropriate functions performed. A built-in audit system allows all transactions to be retrieved and all communications to be documented. A system allows for predefining via an activity scheduler first types of entered data that are processed by an activity processor in real time and second types of entered data that are queued for processing at another time

Please enter all of the following changes to the claims:

Claim 8 is cancelled.

***Allowable Subject Matter***

6. Claims 1-7, 9, 17-19, and 29 (now renumbered 1-12) are allowed.

7. The following is an examiner's statement of reasons for allowance:

The primary reason for the allowance of claims 1-7, 9, 17-19, and 29 (now renumbered 1-12) is the inclusion of the limitation, in all of the claims which is not found in the prior art references, of a means for predefining via said activity scheduler relative to said entered data that selected first types of entered data are to be processed by said activity processor in real time and that selected second types of said entered data are to be queued for processing at another time. The closest prior art (Aleia et al. 5,991,733) teaches a manage collector queues processing function provides an online ability to move one group of collection accounts from one collectors queue to another collector's queue and prioritize an account for immediate attention by a collector or manager. Aleia fails to teach "real time" processing by an activity processor. The real time processing in Aleia is performed by a human account manager or collection agency. Further, Aleia fails to teach a means for predefining via an activity scheduler. In Aleia, a human performs the step of prioritizing data for immediate attention, whereas in Applicant's system the means for predefining via an activity scheduler is performed by a computer (See Applicant's specification page 13).

***Conclusion***

Art Unit: 3626

8. The prior art made of record and not relied upon is considered pertinent to Applicant's disclosure. The cited but not applied prior art teaches an electronic proposal preparation system for selling vehicles (5,493,490), method and system for facilitating networked information exchange (EP 1 164 502A), system and method for generating and propagating business events (WO 03/005164 A2), and a system and method for developing business process policies (WO 03/005154 A2).
